

Lime Dosing

Continuous Single Shaft Mixers WAH

1

Description ▼

WAH is a Continuous Horizontal Single Shaft Mixer suitable for dry bulk solids (powders, granules, short fibres), dry bulk solids with liquids (conditioning & granulating), sludges and pastes.

WAH Mixers operate on the principle of a mechanically generated fluid bed. Ploughshare or shovel-shaped mixing tools rotate around a horizontal shaft close to the cylindrical drum casing lifting the components to be mixed from the product bed into the open mixing area. The quality of the mixture is achieved before the product reaches the mixer outlet.

Function ▼

The horizontal single shaft mixer WAH is based on the principle of mechanical fluidisation of the product.

The particular shape, position and rotation speed of the mixing tools, creates a centrifugal vortex motion which allows the products to be projected in a three-dimensional way and to merge with each other.

This ensures that components with different particle size and bulk density are perfectly blended and mixed with high precision within the shortest possible time.

Application ▼

MAP® stands for robust and efficient systems for the mechanical, chemical and thermal treatment of sludge, ashes, dust and other residual materials in the disposal lines of local authorities and the industrial sector.

MAP® products cover broad areas in the treatment of sludge, fly ash and residual materials.

- Treatment of sludges and slurries
- Treatment of soils
- Treatment of dusts and ashes
- Treatment of other residual materials / contaminated materials
- Power stations: mixing technology for the micro-granulation of fly ash
- Waste incineration plants
- Sewage sludge / Biosolids
- Moistening and conditioning

Benefits ▼

- ✓ Long-term experience in environmental application;
- ✓ High speed mixing (short mixing time);
- ✓ Durable machine;
- ✓ Minimum wear/low maintenance;
- ✓ Easy access to all internal parts of the machine for maintenance;
- ✓ High productivity.

Lime Dosing

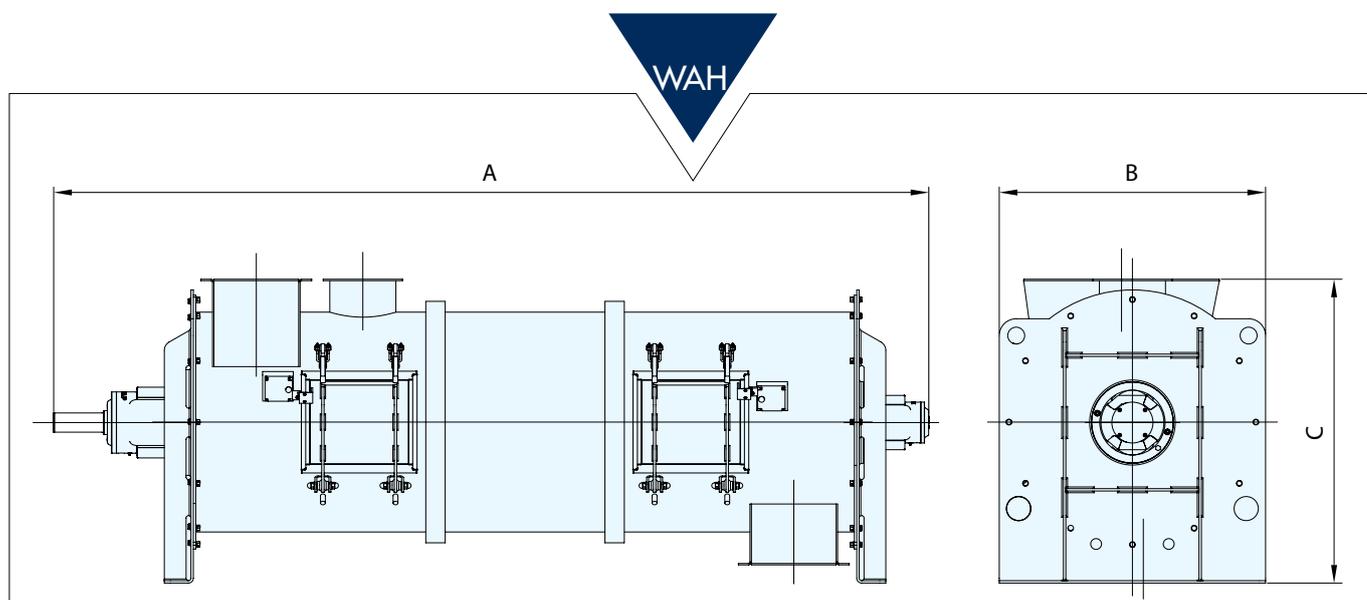

Continuous Single Shaft Mixers WAH

Technical Features / Performance ▼

- ▶ From 75 up to 15,000 litres volume
- ▶ 304L / 316L SS, antiwear materials, antiwear material
- ▶ Different mixing tools
- ▶ Choppers and liquid injection
- ▶ Great variety of accessories and options available
- ▶ Adjustable front discharge
- ▶ Specially design drive units

Lime Dosing

Continuous Twin Shaft Paddle Mixers MES-C

2

Description ▼

MES-C-type Twin Shaft Paddle Mixers (MES-C-UM as conditioner with liquid injection) are equipped with two parallel counter-rotating intermeshing paddle shafts. The adjustable angle of inclination of the mixing paddles allows perfect adaptation to the different characteristics of the materials and to the requirements of the mixing process.

Function ▼

MES-C-type Twin Shaft Paddle Mixers are used for mixing powders as well as for the neutralization or the conditioning of sludge with lime. MAP® stands for robust and efficient systems for the mechanical, chemical and thermal treatment of sludge, ashes, dust and other residual materials in the disposal lines of local authorities and industrial sectors.

Application ▼

MAP® products cover broad areas in the treatment of sludge, fly ash and residual materials.

- Treatment of sludge and slurry
- Treatment of soils
- Treatment of dusts and ashes
- Treatment of other residual materials / contaminated materials
- Power stations: mixing technology for micro-granulation of fly ash
- Waste incineration plants
- Sewage sludge / Biosolids
- Moistening and conditioning

Benefits ▼

- ✓ Long-term experience in environmental applications;
- ✓ Modular design with low maintenance costs;
- ✓ Durable machine;
- ✓ Easy access to all internal parts of the mixer for maintenance;
- ✓ High productivity.

Lime Dosing

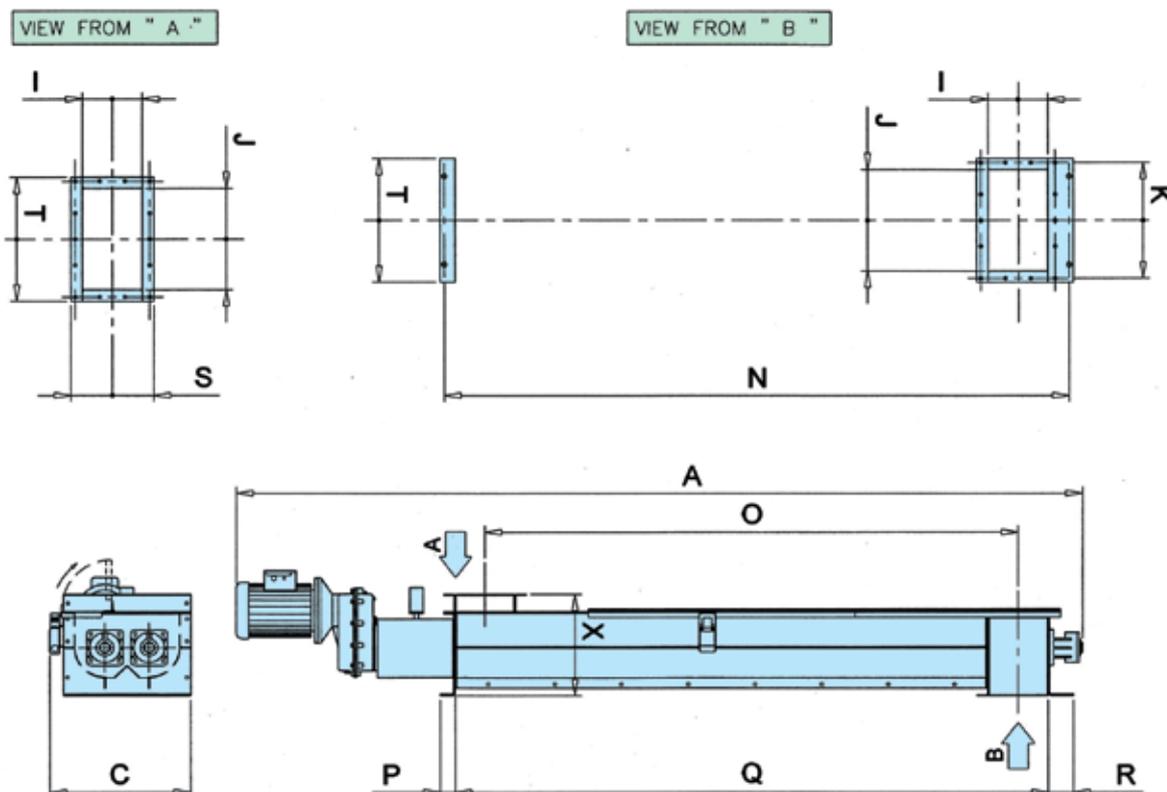

Continuous Twin Shaft Paddle Mixers MESC

Technical Features / Performance ▼

- ▶ Capacity: from 3 to 70m³/h (1.8 to 41 cfm)
- ▶ 304L / 316L SS, antiwear materials
- ▶ Tools with anti-wear coating
- ▶ Equipment for liquid injection
- ▶ Great variety of accessories and options available

WAMFLO®

Silo Venting Filters

3

Description ▼

WAMFLO® Dust Collectors have been specifically developed for venting pneumatically loaded silos containing sticky materials. WAMFLO® is equipped with a round stainless steel body (diameter 1,000mm) that contains vertically mounted round bag-type filter elements with polyester felt filter media. To keep the filter media clean an air jet cleaning system is integrated in the 304 stainless steel top cover.

Function ▼

WAMFLO® Dust Collectors are used for both venting and suction applications. Dust separated from the air flow by the round bags drops back into the silo, after an integrated automatic reverse air jet cleaning system has removed it from the filter elements.

Application ▼

WAMFLO® Dust Collectors are mainly used for venting of lime silos. The total filter surface amounts to 16 m².

Benefits ▼

- ✓ Compliance with health and safety standards;
- ✓ Dust emission < 10 mg/Nm³;
- ✓ Air volume 1,800 m³/h;
- ✓ Real filter surface 16 m²;
- ✓ Round bags available on after-market;
- ✓ Easy maintenance thanks to filter elements manually removable without tools;
- ✓ Durable thanks to stainless steel design and high quality filter media;
- ✓ Easy maintenance thanks to cleaning system integrated in weather protection cover;
- ✓ Round bags particularly suitable with sticky materials.

Lime Dosing

WAMFLO®

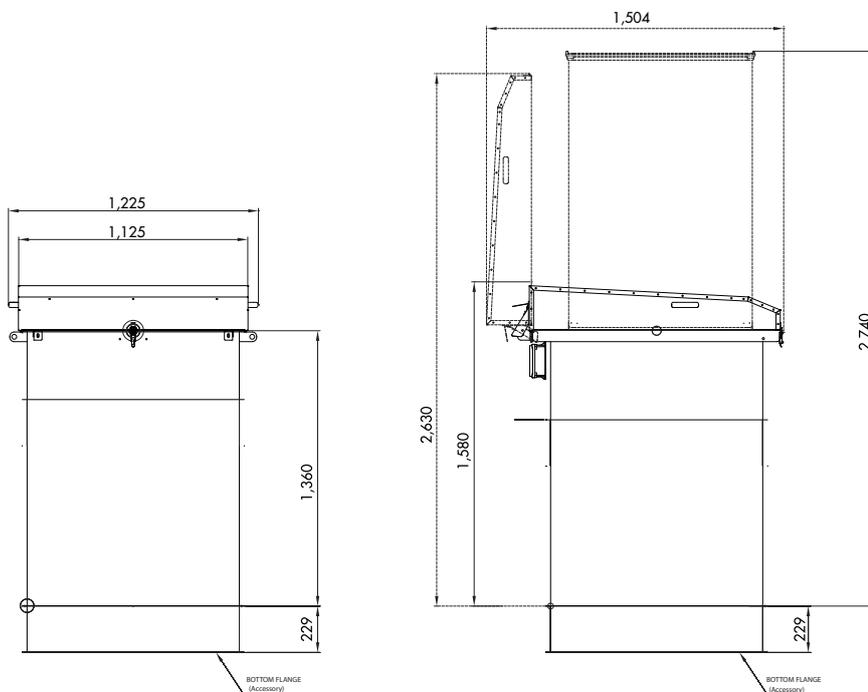

Silo Venting Filters

Technical Features / Performance ▼

- ▶ 304 SS flanged cylindrical body (Ø 1,000mm)
- ▶ Filter surface 16m² (more on request)
- ▶ Dust emission < 10 mg/Nm³
- ▶ Compressed air-jet cleaning system integrated in top cover
- ▶ Air volume: max 1,800 m³/h
- ▶ High cleaning efficiency due to "Full Immersion" solenoid valves integrated in aluminium air tank (corrosion-resistant) ensuring low-maintenance operation
- ▶ No tools for filtering element removal required

Overall Dimensions ▼

Lime Dosing

Butterfly Valves V2FF / V.FS

4

Description ▼

V2FF Silo Discharge Butterfly Valves are manufactured from a single-piece fabricated carbon steel body lined with WAM®'s polymer composite SINT®. Due to the four corner slots the integrated upper square flange can be adapted to different sizes of silo outlet flanges. The valve disc is manufactured from surface-treated carbon steel.

VFS Butterfly Valves consist of two high-pressure die-cast semi-bodies manufactured from aluminium alloy, a swivel disc in SINT® polymer composite or cast iron, and a pre-stressed elastomer seal. While V1FS has a top flange and a beaded bottom section suitable for the attachment of a flexible sleeve, the V2FS comes with an identical top and bottom flange.

Function ▼

For closing bins, hoppers and silos containing lime or powdery materials, Butterfly Valves are among the most widely used equipment worldwide. What used to be custom-built items for specific applications, have been turned by WAM® into a mass-produced industrial product with features that allow extremely versatile use.

Material flow is intercepted by activating a manual lever or a pneumatic or electric actuator turning the valve disc 90 degrees, thus closing the valve hermetically.

Application ▼

V2FF Silo Shut-Off Butterfly Valves are used wherever interception of gravity-fed powdery materials is required. They are fitted beneath hoppers, bins, or silos.

V.FS Butterfly Valves are used where interception of gravity-fed or pneumatically conveyed dry materials is required. They are fitted beneath hoppers, bins, silos, screw feeder outlets, or in a 0.2 bar (29 PSI) pressure-proof version, on water scales outlets. Due to their special design and to the engineering materials used, they represent a particularly cost-effective yet most efficient solution.

Benefits ▼

- ✓ **Dust-tight (V.FS for water scales 0.2 bar pressure-proof);**
- ✓ **Quick fitting, retro-fitting and replacement;**
- ✓ **Modular design and easy maintenance thanks to small numbers of components;**
- ✓ **High flexibility thanks to interchangeable components;**
- ✓ **More durable thanks to special performance features.**

Lime Dosing

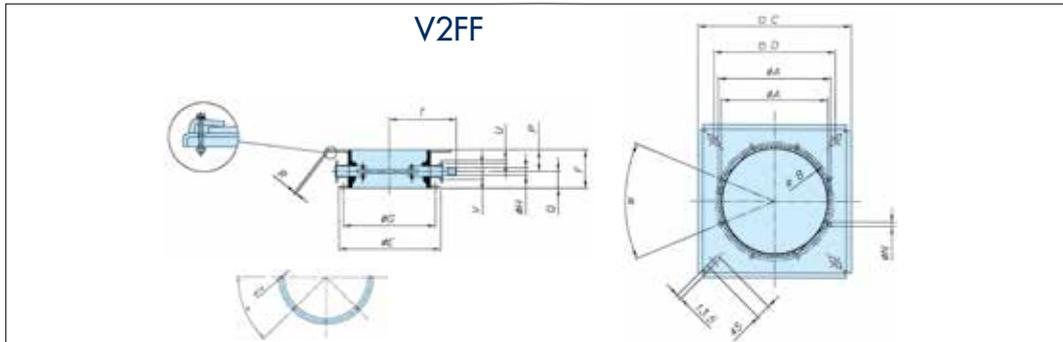

Butterfly Valves V2FF / V.FS

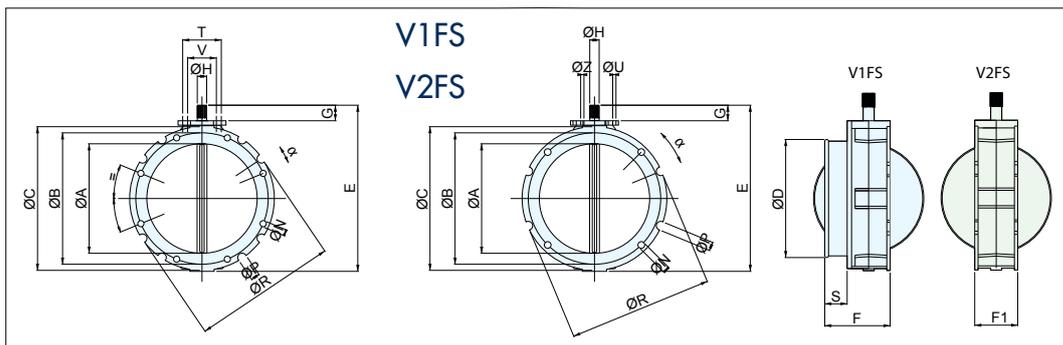

Technical Features / Performance

- ▶ V1FS with top flange and beaded bottom section suitable for fixing of flexible sleeve from 100 to 400mm (4 to 16 in)
- ▶ V2FS with identical top and bottom flange from 100 to 400mm (4 to 16 in)
- ▶ On request, VFS pressure-proof up to 0.2 bar (2.9 PSI) and max. temperature of 100° C (212° F)
- ▶ VFS with disc in cast iron or SINT®-coated
- ▶ Small number of components
- ▶ Easy part replacement

Slide Valves VL

5

Description ▼

VL-type Slide Valves consist of a two-piece carbon or stainless steel frame, which is partly coated with WAM®'s unique SINT® engineering polymer composite, and a sliding blade manufactured either from the same material or from carbon or stainless steel. The use of SINT® engineering polymer composites considerably increases resistance to abrasion compared to traditional valves.

Function ▼

VL Slides Valves are used where flow of a bulk solid or sludge caused by gravity or conveying has to be intercepted. Valves may be fitted to hopper or silo outlets, to the inlets and outlets of mechanical conveyors or to the inlet of telescopic loading spouts.

Application ▼

The special geometry of the VL Slide Valves and the different options of blade design enable their application in virtually all type of powder and processing plants where interception of gravity-fed or pneumatically conveyed dry materials is required. Typical applications are storage, conveying and processing lines. They are fitted beneath hoppers, bins, silos, screw or other type conveyors. Due to their special design and the engineering polymer materials used, they represent a particularly cost-effective yet most efficient solution.

Benefits ▼

- ✓ **No contamination due to metal steel blade and valve frame coated with polymer material;**
- ✓ **Reduced crusting effects due to valve frame coated with low-friction polymer material;**
- ✓ **Dust-tight thanks to component geometry;**
- ✓ **Suitable for different materials in same configuration;**
- ✓ **Easy process integration;**
- ✓ **Time-saving maintenance thanks to small number of components;**
- ✓ **Optimum performance thanks to friction-free contact design (actuator torque is not wasted to win friction resistance).**

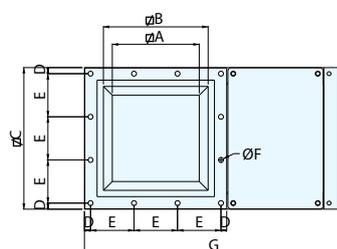

Lime Dosing Slide Valves VL

Technical Features / Performance ▼

- ▶ Square (VLQ) or round (VLC) inlet from 150 to 400mm (6 to 16 in)
- ▶ Rectangular inlet for 300mm size (12 in)
- ▶ Dust-tight, max. temperature T= 80°C (176 F°)
- ▶ Blade in mild or stainless steel or coated in SINT® engineering polymer
- ▶ Frame in mild or stainless steel
- ▶ Absence of stagnation points
- ▶ Friction-free contact design
- ▶ Safe sealing with no additional measures due to the all-round dust-tight seal lips incorporated in the polymer coating

Spring-Loaded Pressure Relief Valves VCP

6

Description ▼

VCP Pressure Relief Valves consist of a cylindrical casing with a bottom flange to be connected with a spigot welded on the silo roof, a disc shape inner steel lid for negative pressure operation held in position by a central spring rod, an outside steel ring for excess pressure kept in position by three spring rods, gaskets, and a weather protection cover.

Function ▼

In the VCP Pressure Relief Valve, helical springs keep the valve lids closed when the pressure value remains within the preset limits. The three outside spring rods keep the external ring-shaped lid firmly closed as long as the force generated by the pressure inside the silo does not overcome the spring force. Once the pressure exceeds the preset value the lid is pushed up and the pressure can escape. The smaller lid covers the central circular opening of the external lid from below. It is held in the middle by a single spring rod and is pressed onto the external lid by the normal air pressure inside the silo. In the event of suction pressure, the spring is compressed and allows the lid to drop. The air entering the silo from outside ensures rapid pressure balance and pushes the central lid back up into the "closed" position.

Application ▼

VCP Pressure Relief Valves are the last resort when abnormal pressure conditions endanger the silo structure. This is why sudden excess or suction pressure inside the silo must be dealt with instantaneously. Even though ideally a Pressure Relief Valve should never have to go into action, it must be efficient and reliable if needed. With tens of thousands of units installed worldwide, VCP Pressure Relief Valves have given evidence of being totally reliable under the most different conditions.

Benefits ▼

- ✓ Safety for OEM and EU thanks to Atex certification zone 21;
- ✓ Lightweight design and reduced overall dimensions make handling extremely comfortable;
- ✓ High resistance to atmospheric agents;
- ✓ Easy to fit;
- ✓ Quick maintenance.

Lime Dosing

Spring-Loaded Pressure Relief Valves VCP

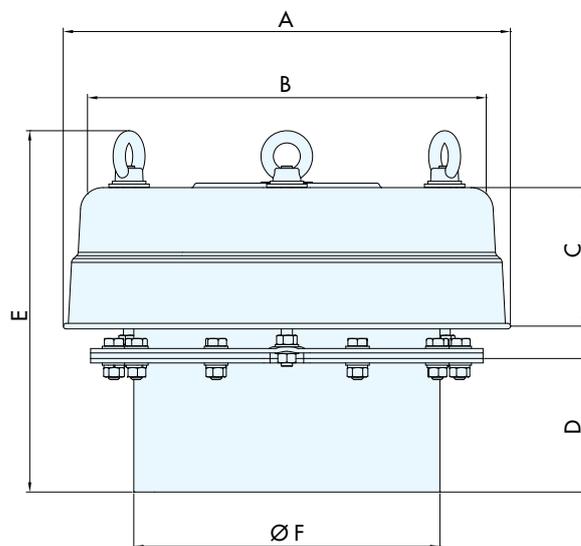

Technical Features / Performance ▼

- ▶ Carbon steel body (VCP...1C) painted RAL 7001 or 304 stainless steel body (VCP...2C)
- ▶ Two size: 273mm (11 in); 356mm (14 in)
- ▶ Weather protection cover in stainless steel
- ▶ In compliance with Atex Certification (zone 21) and HSE British Guideline
- ▶ Air volume up to 13,000m³/h (7,650 cfm)
- ▶ Setting range: excess pressure from 300 mmH₂O (0.44psi) up to 800 mmH₂O (1.16 psi)
- ▶ Setting range: negative pressure from -50 mmH₂O (0.07psi) up to -100 mmH₂O (0.15psi)
- ▶ No welding seams inside
- ▶ Equipment for inductive signalling sensors
- ▶ Protective bellows for springs
- ▶ Small number of components
- ▶ Easy part replacement
- ▶ Lightweight and easy to handle

Plastic Pressure Relief Valve VHS-C

**7**

Description ▼

VHS Pressure Relief Valves consist of a cylindrically shaped body with clamp connection spigot to the silo, an exhaust outlet spout for duct connection, an elastic diaphragm able to re-establish pressure balance instantaneously, a counter-weight kit to keep the valve closed under normal conditions, and a weather protection cover.

Application ▼

VHS Pressure Relief Valves are the last safety net when abnormal pressure conditions endanger the silo structure. This is why sudden excess or suction pressure inside the silo must be dealt with instantly.

Even though ideally a VHS Pressure Relief Valve should never have to go into action, it must be efficient and reliable if needed.

Silo workspace using spring-loaded valve

Silo workspace using VHS valve

Benefits ▼

- ✓ Compliance with existing regulations
- ✓ Safety for people, plant and environment
- ✓ Maximum efficiency and minimum operating costs
- ✓ Quick and easy maintenance
- ✓ Easy handling thanks to light-weight design
- ✓ Attractive price

Lime Dosing

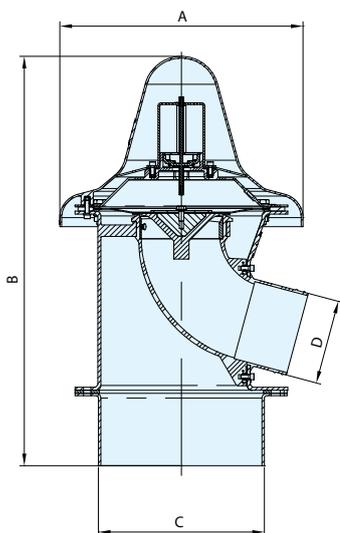

Plastic Pressure Relief Valve VHS-C

Technical Features / Performance ▼

- ▶ Body diameter 273mm (10 in)
- ▶ Exhaust outlet spout for connection with centralised suction system
- ▶ Preset for maximum negative pressure of - 0.005 bar (0.07 psi) and maximum excess pressure of + 0.05 bar (0.72 psi)
- ▶ Equipped for inductive signalling sensors
- ▶ Easy part replacement
- ▶ Lightweight
- ▶ Conveyed emissions
- ▶ Counterweight system never in contact with dust
- ▶ Body and cover made of engineering polymer
- ▶ Special properties of diaphragm and elbow prevent clogging, as well as formation of material crusts

EXTRABEND® and EXTRACURVE® Pipe Elbows

8

Description ▼

Short-radius EXTRABEND® and wide-radius EXTRACURVE® Pipe Elbows are inserted as a link in pneumatic silo filling pipes. Both models are manufactured from a one-piece SINT™ engineering polymer cast.

Wear-resistant EXTRABEND® and EXTRACURVE® Pipe Elbows deflect incoming powdery materials minimising degradation and elbow wear, avoiding at the same time any clogging or plugging.

Function ▼

The EXTRABEND® short-radius Pipe Elbow offers a substantially innovative geometry suitable to reduce wear during operation.

The body cavity next to the point of diversion generates an internal material turbulence which protects the elbow from wear caused by the material travelling through the duct.

The EXTRACURVE® represents the latest evolution in the development of wide angle pipe elbows. Due to its flexibility and adaptability installation has become quicker while durability is dramatically increased.

Application ▼

EXTRABEND® and EXTRACURVE® Elbows are used as a link in silo filling pipes and in ductworks of pneumatic conveying systems. They excel through their particular resistance to wear with abrasive materials.

Benefits ▼

- ✓ Long-life elbow with abrasive materials thanks to anti-wear SINT™ engineering polymer material;
- ✓ Reduced installation costs thanks to elastic properties (no extra work for connection on site is needed);
- ✓ Reduced installation and maintenance time because EB/EW are easy to handle thanks to lightweight design;
- ✓ Reduced costs for plant designing thanks to elastic properties (elastic elbows fit for different plant layouts);
- ✓ Considerable reduction of flow resistance, consequently energy saving pneumatic conveying.

Lime Dosing

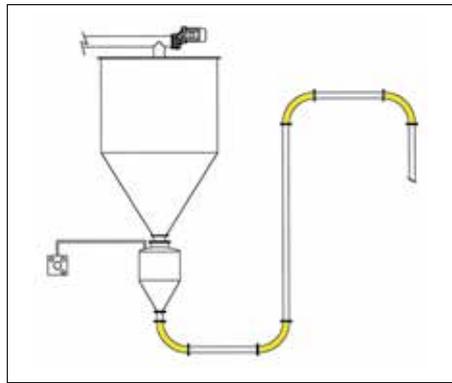

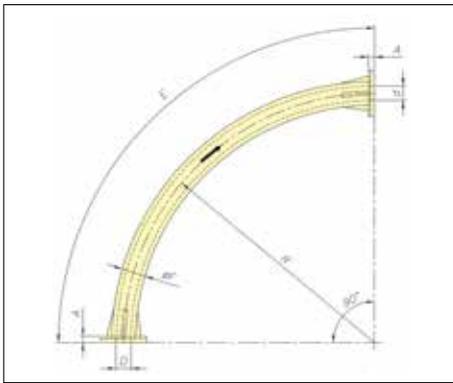

EXTRABEND® and EXTRACURVE® Pipe Elbows

Technical Features / Performance ▼

- ▶ SINT™ engineering polymer
- ▶ Range from 2" to 4"
- ▶ PN-type connecting flanges
- ▶ Up to 1.5 bar (22 PSI) in lean phase
- ▶ Max temperature: 80° C (176° F)
- ▶ Flexible and elastic
- ▶ Lightweight and easy to handle
- ▶ Reduced noise level

Lime Dosing

Micro-Batch Feeders MBF

9

Description ▼

The MBF Micro-Batch Feeder for continuous volumetric feeding of powdery materials consists of a casing entirely manufactured from stainless steel or steel-reinforced SINT® engineering polymer body, a horizontally mounted rotating agitator tool, a feeder screw beneath the agitator tool, a feeder pipe enclosing the protruding feeder screw, as well as one drive unit each for agitator and feeder screw.

Function ▼

MBF Micro-Batch Feeders are particularly suitable for poorly flowing materials which tend to clog, as well as for adhesive products. Fed through a bag opening hopper, a bulk bag discharger, or another feeding device, the agitator tool manages to keep the material flowing, reducing at the same time the possibility of formation of lumps or bridges.

The size of the material particles is of utmost importance when choosing the type of feeder screw. Poorly flowing materials with cohesion or bridging problems are homogeneously fed into the feeding zone by the blending or agitator shaft which is shaped according to the product properties.

Depending on the user's individual requirements, the MBF Micro-Batch Feeder can be supplied with alternative feeder screws and blending tools and with various accessories.

Application ▼

MBF, which come in various configurations, are suitable for feeding of granules or powders.

Flexible design features enable feeding of lime, flocculants, polyelectrolyte or additives in general.

A typical position within the plant is on top of a sludge conditioner or as part of a polyelectrolyte dosing station.

Benefits ▼

- ✓ Easy integration into the plant;
- ✓ Feeding of different additives with the same unit thank to interchangeable components;
- ✓ Small number of parts ensures easy and quick maintenance;
- ✓ Independent drives for agitator and feeder tool leave all options open in terms of drive power and tool speed;
- ✓ Process reliability thanks to back-up by WAMGROUP® test labs;
- ✓ High degree of homogeneity of fed material due to blending/agitating tool;
- ✓ Easy and quick internal cleaning thanks to engineering SINT® polymer non-stick surface and quick-access inspection panel.

Lime Dosing

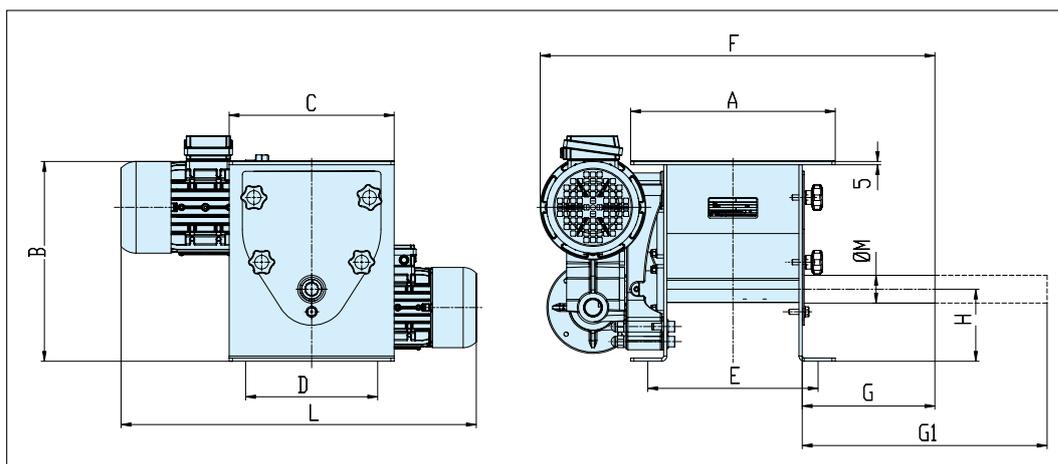

Micro-Batch Feeders MBF

Technical Features / Performance ▼

- ▶ Wide range of interchangeable machine components
- ▶ Suitable for powders or granular materials
- ▶ Compact design, small footprint
- ▶ 3 sizes available with feed rates ranging from 3 dm³/h to 4,000 dm³/h
- ▶ Agitator and feeder tool with independent drives
- ▶ Internal geometry guarantees smooth feeding of particularly difficult materials
- ▶ No residue dead spaces
- ▶ Quick-access inspection panel available on stainless steel units
- ▶ Contact surfaces in SINT® engineering polymer or 304 SS (316 option)
- ▶ Different types of shaft seals

Overall Dimensions ▼

Lime Dosing Bin Activators BA

10

Description ▼

The BA Bin Activator is a device of tapered conical shape that due to vibration facilitates material flow from hoppers or silos. It consists of a seamless carbon or stainless steel cone manufactured on a sheet metal lathe, a seamless SINT® engineering polymer seal with integrated upper and lower flange, suspensions for connection with the silo, as well as one or two electric vibrators.

Function ▼

One or two electric vibrators fitted to the unit generate vibration of the Bin Activator every time the feeding device beneath the silo is started for material extraction. During operation the Bin Activator describes a gyratory movement which is transmitted to the material inside the silo. The result is smooth material flow through the Bin Activator outlet into the downstream feeder.

BA Bin Activators are used in various applications to facilitate discharging of powdery materials from silos or hoppers. The use of this equipment ensures optimum feeding of the material causing "mass flow" inside the silo, thus avoiding bridging or rat holing phenomena.

Application ▼

Discharging of lime from silo.

The BA outlet is usually shut off by a rotary valve, slide valve or butterfly valve which is connected with a downstream screw conveyor or micro-batch feeder.

Benefits ▼

- ✓ **No material residue thanks to appropriate design features;**
- ✓ **High resistance to corrosion with stainless steel version;**
- ✓ **High discharging performance;**
- ✓ **Reduced maintenance thanks to long-life seal material.**

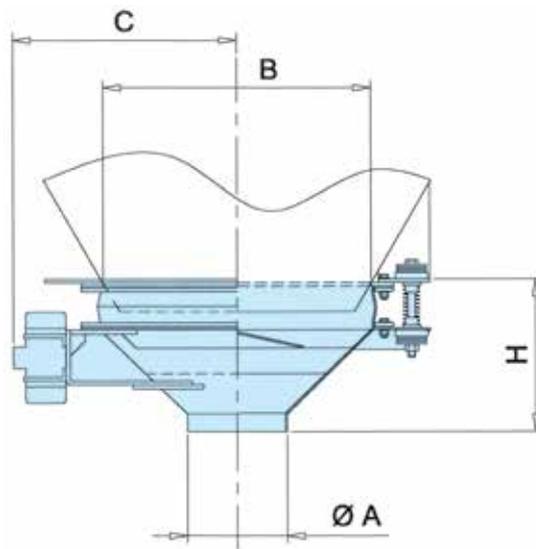

Lime Dosing Bin Activators BA

Technical Features / Performance ▼

- ▶ Diameters up to 2,350mm (8 ft)
- ▶ Fabricated parts available in 304L and 316 stainless steel
- ▶ No internal residue deadspace
- ▶ Suspensions suitable for positive or negative pressure silo filling
- ▶ Construction material: carbon or stainless steel
- ▶ Vibrating outlet cone fitted with outlet opening hatchway

Lime Dosing

Delumper DLP

11

Description ▼

The DLP Lump Breaker consists of a square cross section casing with upper and lower flange, two horizontal rotating shafts equipped with chopping knives, a grid to hold back lumps, four end bearing assemblies with integrated adjustable shaft sealing unit, an appropriately sized drive unit complete with power transmission.

Function ▼

The DLP Lump Breaker is the ideal device for breaking up material lumps which have formed during material handling or processing but are soft enough to be broken up.

The quick rotation of the special chopping knives through a fixed grid carry out the job. The presence of two rotor shafts results in high throughput rates.

Application ▼

To break up lumps in the powder or granular product.

In the presence of moisture, most powdery or granular products stored in silos, bags and FIBC form lumps that are more or less consistent and of different sizes. DLP is suitable to be installed at the outlet of a Bin Activator as well as a FIBC Discharger in order to brake any possible lump and reduce grain size from a maximum of 5 mm to the minimum original one.

In certain applications, it is therefore necessary to break up the lumps not only to reduce the grain size but also with the aim to make it as uniform as possible to facilitate further handling operations.

Benefits ▼

- ✓ Simple and compact solutions;
- ✓ Different sizes;
- ✓ Competitive price;
- ✓ Easy Maintenance;
- ✓ Strong Design.

Lime Dosing

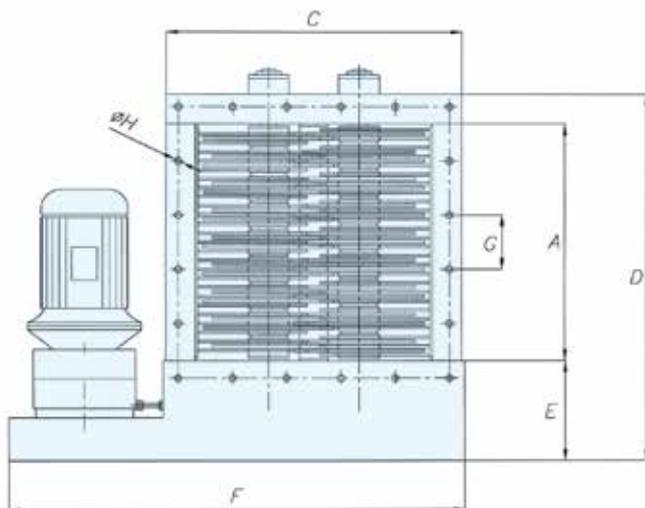

Delumper DLP

Technical Features / Performance ▼

- ▶ Construction material: Carbon steel, 304 L / 316 L stainless steel
- ▶ Available with de-dusting filter or equipped for centralised dust suction
- ▶ Filter element options: cartridges, round bags, elliptical bags
- ▶ Filter surface from 3 to 22 m² (32 to 237 sq ft)
- ▶ Collecting hoppers with different capacity volumes
- ▶ Support feet with possibility of height adjustment
- ▶ Available in ATEX version, zone 22
- ▶ Space-saving overall dimensions and compact user-oriented design
- ▶ Built-in fan-operated, air jet-cleaned, maintenance-friendly dust collector
- ▶ Through optional BINSWEEP® Rotary Discharging Device (see chapter) low overall height
- ▶ Favorable price-performance ratio

Manual Bag Openers RSM

12

Description ▼

The RSM Manual Bag Opener consists of a grille with a rest fitted to its front; the grille is mounted on top of a hopper which is supported by four feet. A fabricated hood with protection door fitted to its front covers the hopper and grille. RSM Bag Openers are manufactured in high-finish-grade materials and come with or without integrated de-dusting filter unit. In the version with integrated dust filter the filter elements are cleaned pneumatically by reverse air jet.

Function ▼

The operator puts the bag on the rest and pushes it on to the grille. He then slits the bag open with a vertical cut and shakes it empty. While the bag content is discharged through a hopper or by BINSWEEP® (optional), a special rotary discharging device, into any type of feeder, the built-in fan operated, air jet cleaned dust collector filters the dust generated during emptying. The empty bag is dropped in the chute on the side which leads into the optional COM-type Waste Bag Compactor (optional). Manual RSM Bag Openers are designed to minimize material residue. They are suitable for numerous customizations and satisfy a large number of applications due to their modular component design.

Application ▼

The RSM Manual Bag Opener represents the ideal solution for the emptying of bags containing powders or granules in a completely dust-free environment, such as lime, chemical salt, etc.)

- Pneumatic vibrator for specially equipped hoppers
- Special type hopper for fitting of BINSWEEP® Rotary Discharger (optional)
- Accessories for connection of COM-type Waste Bag Compactor (optional)

Benefits ▼

- ✓ Simple and compact solution, environmentally safe;
- ✓ Competitive price;
- ✓ Easy Maintenance;
- ✓ Strong Design;

RV-RVR Drop-Through Rotary Valves

13

Description ▼

RV Drop-Through Rotary Valves consist of a tubular cast iron or stainless steel casing, a horizontally mounted rotor with a certain number of V-shaped cross section compartments, a drive unit and a casing cover opposite the drive end.

Function ▼

RV Rotary Valves have been developed for maximum versatility in application. They are suitable for controlled discharging and feeding of powdery or granular materials from silos, hoppers, pneumatic conveying systems, bag filter houses, or cyclones.

Application ▼

RV-RVR Rotary valves are fitted at the outlet of silos, bins or hoppers for feeding the discharged material with high accuracy into the downstream process.

Benefits ▼

- ✓ Air-purged seals;
- ✓ Atex zone 22-certified;
- ✓ Square or round flanges ensure system compatibility and match with WAM® flanges;
- ✓ Cast iron or SS, nickel coating, chrome-plated casing, as well as various rotor versions available to ensure the most appropriate configuration for application requirements;
- ✓ Quick integration into the process thanks to easy handling;
- ✓ Modular design and easy maintenance thanks to small number of components.

Lime Dosing

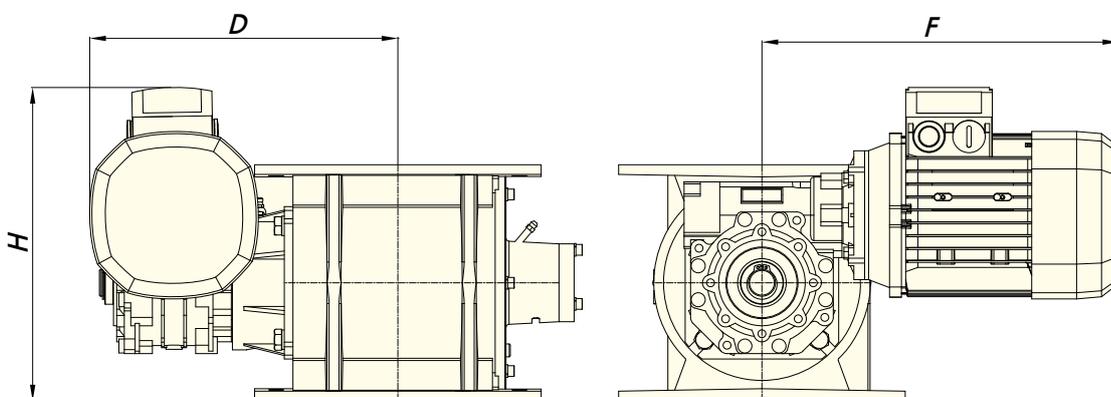

RV-RVR Drop-Through Rotary Valves

Technical Features / Performance ▼

- ▶ Capacity: 2.2 ~ 19.5 litres per revolution
(0.08 ~ 0.7 cu ft per revolution)
- ▶ Working temperature: - 20° C ~ 150° C (- 4° F ~ 300° F)
- ▶ Maximum differential pressure: 0.3 bar (4.4 psi)
- ▶ Cast iron or SS design
- ▶ Nickel coating or chrome-plated casing for abrasive materials available
- ▶ Rotor with beveled blades or replaceable tips available
- ▶ Sturdy compact structure
- ▶ Small footprint
- ▶ Drive unit mounted directly on shaft without further bearing assembly or coupling
- ▶ Square or round flanges and inlet spouts
- ▶ Compatibility with WAM® standard flanges on inlet and outlet

Lime Dosing

Rotary Level Indicators ILT

14

Description ▼

ILT-type Bin Level Indicators are designed for electric signalling by rotary action of minimum or maximum material level inside bins, hoppers or silos.

Function ▼

As long as material is present, the paddle of the ILT Bin Level Indicator does not rotate. As soon as the material level sinks below the paddle radius, rotation restarts activating other system components. The top or side-mounted indicators are commonly used for materials having a bulk density ranging between $0.5t/m^3$ (0.02 lb per cu in) and $2t/m^3$ (0.08 lb per cu in).

Application ▼

Typically ILT Rotary Level Indicators are fitted on the cylindrical part of a silo at the desired maximum or minimum level. Equipped with an extension rod, they can also be mounted vertically into the roof plate.

Benefits ▼

- ✓ No material contact with the casing;
- ✓ Adjustable by resetting force spring in 3 positions;
- ✓ Double threaded fitting ensures system compatibility;
- ✓ Use with different materials in one single configuration;
- ✓ Easy and quick installation and replacement;
- ✓ Compact overall dimensions;
- ✓ Lightweight due to casing in aluminium alloy;
- ✓ Maintenance-free;
- ✓ Cost-effective.

Lime Dosing

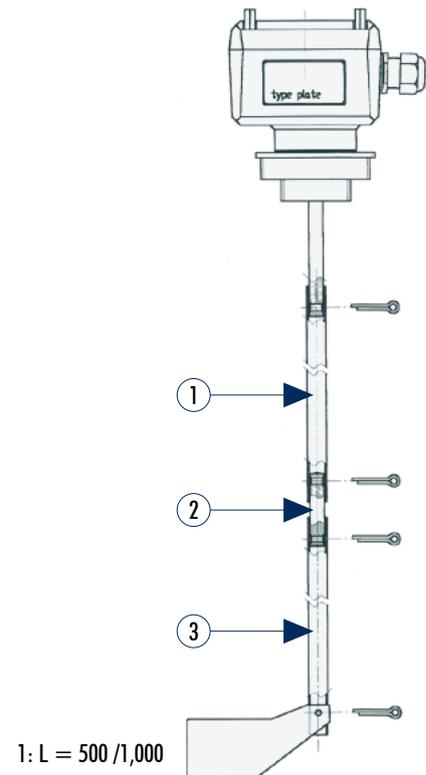

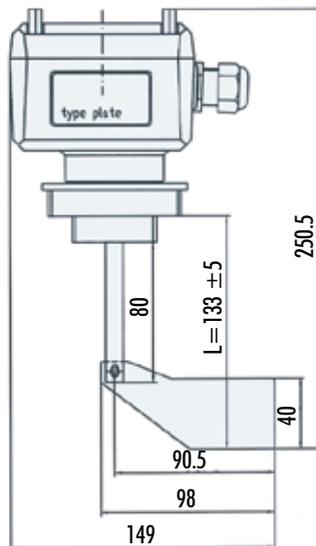

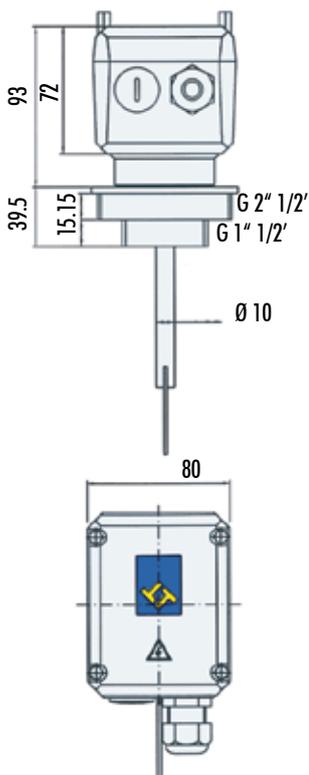

Rotary Level Indicators ILT

Technical Features / Performance ▼

- ▶ Voltages available: 24 V – 48 V (AC), 50-60 Hz; 110 V – 230 V (AC), 50-60 Hz; 24 V (DC)
- ▶ Signal output: Floating microswitch AC max. 250 V, 2 A
- ▶ Standard connection: thread G 1½" – G 2½"
- ▶ Enclosure: IP 66
- ▶ Working temperature inside vessel: - 20 °C to 80 °C (- 4° F to 178° F)
- ▶ Vessel maximum pressure: max. 0.8 bar (12 PSI)
- ▶ Threaded fittings material: Plastic
- ▶ Rotating shaft and measuring paddle material: 304 stainless steel
- ▶ Casing material: Aluminium alloy
- ▶ Speed of measuring paddle: 1 rpm
- ▶ Friction clutch protection of gears from impacts on measuring paddle
- ▶ Self-opening double paddle for light materials
- ▶ Flanged connection as option
- ▶ Modular shaft extension up to 3 metres (10 ft)
- ▶ External light

Overall Dimensions ▼

Lime Dosing

Continuous Level Measurement - ILS

15

Description ▼

A sensor weight, attached to a metal tape or rope, is electromechanically lowered into the vessel. Once the sensor weight rests on the material, the winding direction of the motor changes and the sensor weight is rewound to the upper stop position. As the weight is lowered, the distance is electronically measured.

A microprocessor converts the measured distance together with the programmed silo geometry into a volumetric output signal. This signal is updated each time the sensor weight is lowered.

Application ▼

Benefits ▼

- ✓ **Appropriate for nearly all kinds of bulk solids;**
- ✓ **Insensitive to:**
 - *Dielectricity and conductivity of the bulk material;*
 - *Dust inside the silo;*
 - *Changes in moisture of the bulk material;*
 - *Materials that tend to stick;*
- ✓ **No mechanical force on the silo top; sensor touches material only on its surface;**
- ✓ **Simple installation and commissioning;**
- ✓ **High-tech measurement; easy to understand;**
- ✓ **Highly accurate measurement.**

Lime Dosing

Lime Dosing

Probe Level Indicators ILK

17

Description ▼

ILK Level Probes are designed for level monitoring in bins, hoppers or silos by means of the capacitance variation detection around the probe.

Function ▼

When material is present near the probe, the electronic module detects the capacitance variation of the volume around the probe and switches the electro-mechanical contact.

Application ▼

ILK Capacitive Level Indicators are fitted upon the walls of a bin, silo or hopper, depending on the type of detection they're installed for.

Benefits ▼

- ✓ Simple and reliable (no moving parts);
- ✓ No product in contact with casing;
- ✓ Suitable for extremely light products;
- ✓ Pre-calibration enabling measurement in most applications with no additional calibration on-site;
- ✓ Adjustable sensitivity (4 ranges);
- ✓ Double-threaded fitting ensures system compatibility;
- ✓ Easy and quick installation and replacement.

Lime Dosing

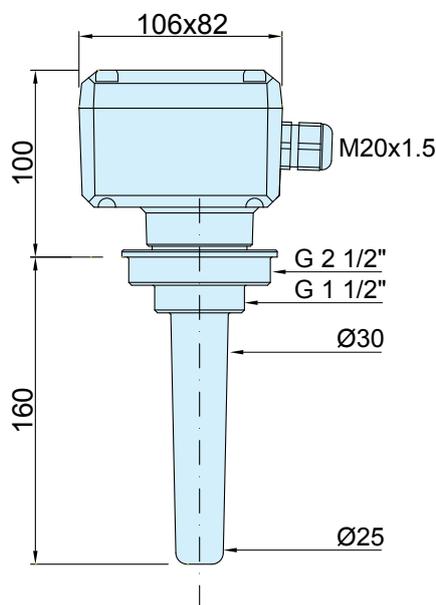

Probe Level Indicators ILK

Technical Features / Performance ▼

- ▶ Product sensitivity: Dielectric constant (Dk)>1.6; max. grain size 30 mm
- ▶ Power supply: 21...27 VDC ($\pm 10\%$); max. 1.5 W
- ▶ Signal Output: Floating relay SPDT AC max. 250 V, 3A non inductive DC max. 30V, 5A non inductive
- ▶ Standard connection: G 1 1/2" - G 2 1/2"
- ▶ Enclosure: IP66
- ▶ Process temperature - 40°C +100°C (up to +120°C if ambient temp. is lower than 50°C)
- ▶ Ambient temperature - 40°C +60°C
- ▶ Max. process pressure: 16 bar
- ▶ Thread fitting and probe material: fiberglass-reinforced plastic
- ▶ Casing material: aluminium alloy
- ▶ Adjustable signal delay from 0.5 s to 20 s
- ▶ Adjustable signal output logic

Silo Safety System KCS

19

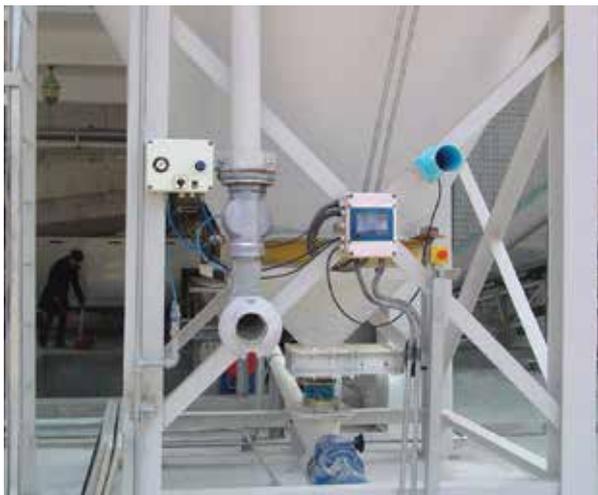

Description ▼

The KCS Silo Safety System for the safeguarding of silos consists of a central electronic monitoring and control unit which manages a series of silos and a component kit including, in the basic version one power panel for each silo, a silo pipe connection, a pinch valve, a tanker coupling with the filling pipe, a maximum level indicator, a differential pressure switch or electronic pressure meter, a pressure gauge for the venting filter, a pressure relief valve, and an audible alarm.

Function ▼

The KCS Silo Safety System can be used for silos which are filled by tanker with powdery materials. Damage to the silo or its accessories is most likely during the operation of tanker filling. This is due to the risk of overfilling or excess pressurisation. The KCS system, supplied in component form, prevents both overfilling and excess pressurisation, thus avoiding damage to the silo, to the venting filter or other accessories, as well as reducing the risk of dust emission into the atmosphere.

Application ▼

In Dry-Mix plants it is essential that each silo is equipped with the safety components described. The control panel should be installed in the central control room from where the plant operator can monitor up to 16 silos.

Benefits ▼

- ✓ Avoids harm to people and damage to the silo and its accessories;
- ✓ Reduces risk of air pollution;
- ✓ Eliminates risk of filling the wrong silo;
- ✓ Starts and stops filter cleaning automatically;
- ✓ Perfect dust emission control.

Lime Dosing

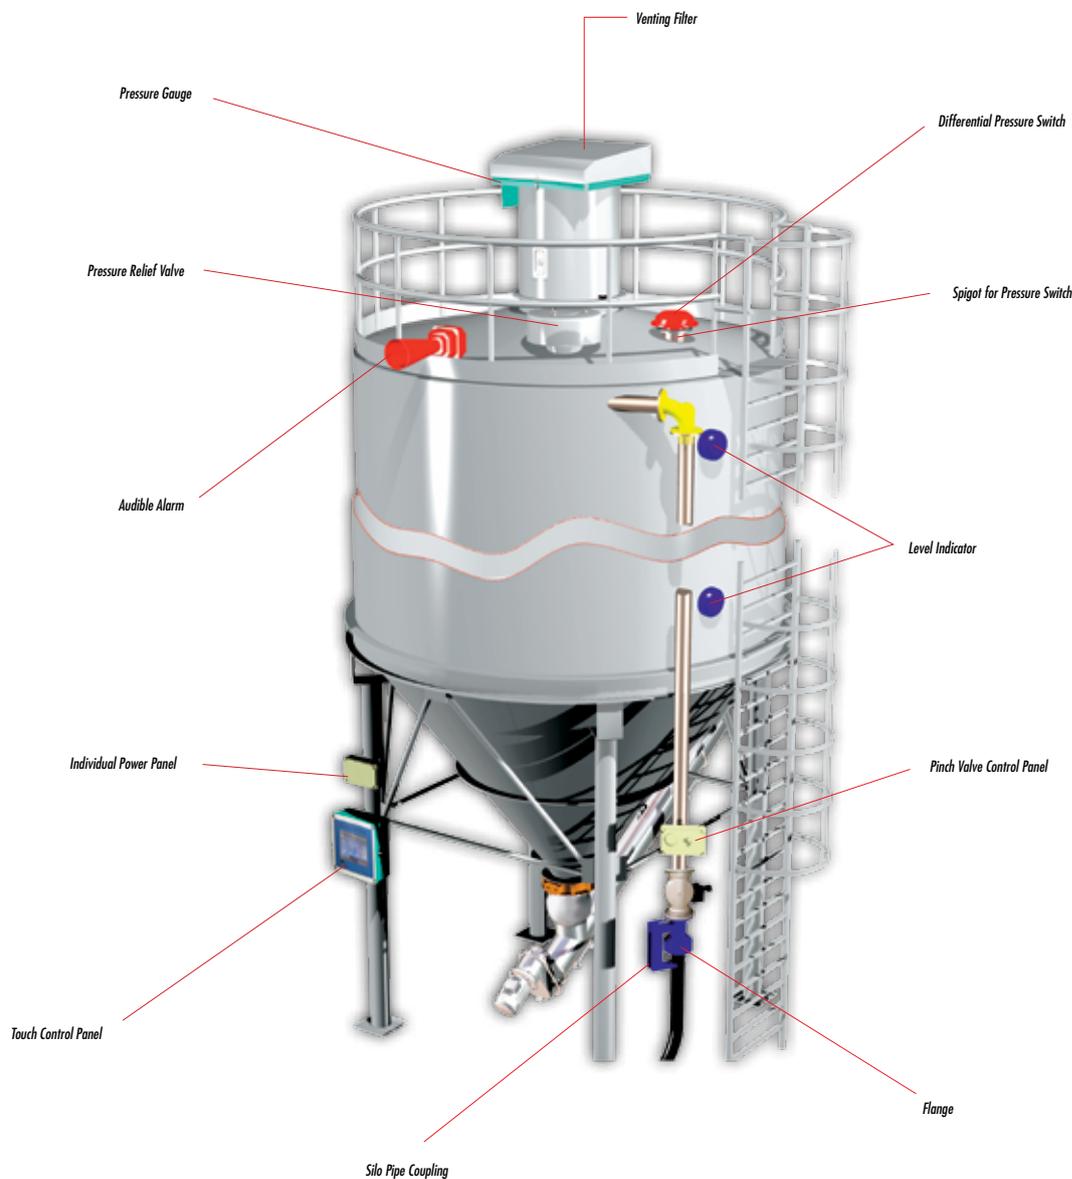

Silo Safety System KCS

Why invest in “KCS” ▼

- ▶ To avoid damage to silo and accessories;
- ▶ To reduce risk of air pollution;
- ▶ To eliminate risk of filling wrong silo;
- ▶ To start and stop filter cleaning automatically;
- ▶ To receive indication from pressure gauge whether filter may need attention;
- ▶ To benefit from control panel monitoring of:
 - Internal pressure of any silo;
 - Maximum level indicator free;
 - Presence of compressed air to venting filter (if air jet filter is used);
 - Presence of compressed air to pinch valve.

Components ▼

This datasheet might not show the complete range but only the models specialised for the application.

Lime Dosing

Pinch Valves VM / Pipe Connections KAT

22

Description ▼

The body of the VM Pinch Valve is manufactured from aluminium alloy. The sleeves are made from fabric-reinforced NR or NBR. The sleeve support bushes are either made from aluminium alloy or 304/316 stainless steel.

Function ▼

VM-type Pinch Valves are used for interception of the material flow in pneumatic conveying systems, or other pipelines. They can be also installed as a locking device for silo filling pipes. In the open position the internal cross section of the valve is identical with the connecting pipe diameter. By introducing compressed air through the threaded bore into the interior of the valve, the internal flexible sleeve is reshaped in such a way as to hermetically seal the passage.

Application ▼

VM Pinch Valves are mounted between the bottom end of the silo filling pipe and the KAT Pipe Connection for tanker filling. Should any abnormal conditions occur, such as excess pressure inside the silo or overfilling of the same, the VM Pinch Valve receives command for instantaneous closure, thus safeguarding the silo from any further filling or overpressurization.

Benefits ▼

- ✓ Full bore-through passage without any pressure loss and stagnation points;
- ✓ Particularly low air consumption;
- ✓ Easy and quick sleeve and bush replacement;
- ✓ Sleeves in fabric-reinforced NR;
- ✓ Compact overall dimensions;
- ✓ Lightweight due to valve body in aluminium alloy;
- ✓ No maintenance required except for periodic replacement of the sleeve and the bushes.

Lime Dosing

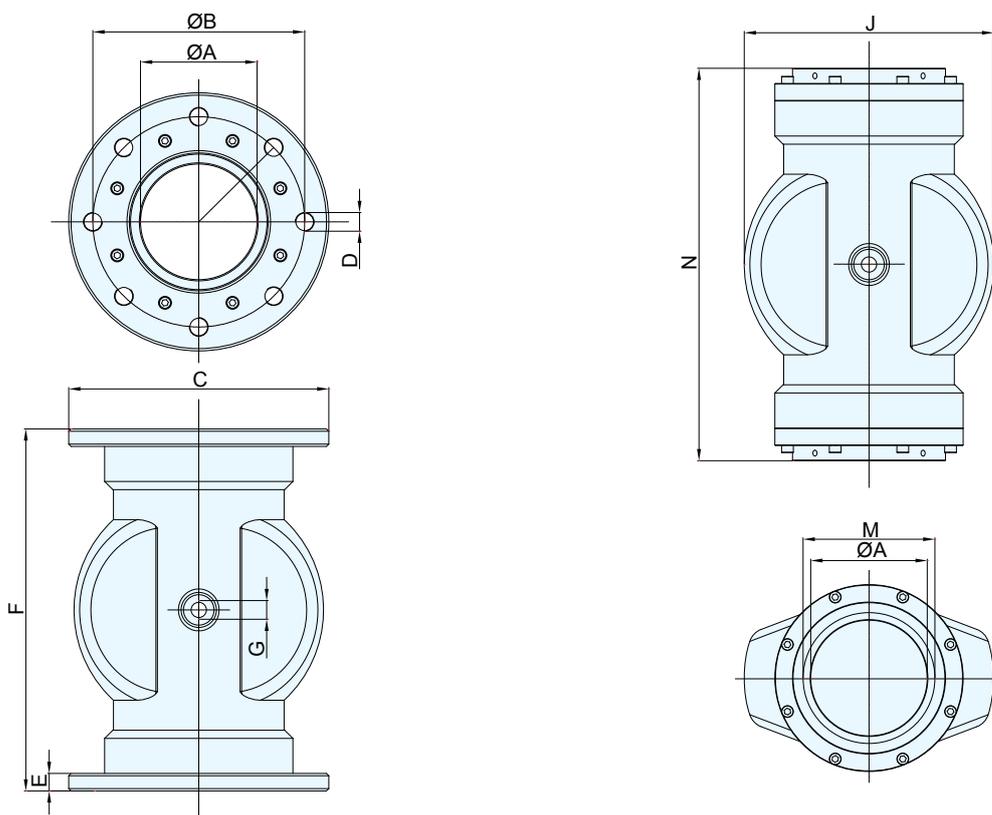

Pinch Valves VM / Pipe Connections KAT

Technical Features / Performance ▼

- ▶ Passage diameter 80mm or 100mm (3 or 4 in)
- ▶ Maximum working pressure: 3.5 bar (52 PSI)
- ▶ Maximum inflation pressure: 6.0 bar (90 PSI)
- ▶ Recommended maximum differential pressure: 2.5 bar (37 PSI)
- ▶ Sleeve material: NR
- ▶ Bush material: Aluminium alloy

Lime Dosing

Diverter Valves VAR

23

Description ▼

The VAR Diverter Valves consist of a cast aluminium body and cover and a rotary inner drum which closes one of the two outlet pipes as required.

The rotation of the inner drum is brought about by means of a pneumatic actuator.

The inner sealing is ensured by pneumatically inflatable gaskets.

Function ▼

The VAR Diverter Valves are suitable for conveying any kind of material, both in powder and granular form.

The pneumatic actuator which activates the inner rotary drum makes it possible to switch the outlet pipe and thereby divert the flow of material from one duct to another one.

Application ▼

The VAR Diverter Valves are fitted directly to the pneumatic conveying ducts whenever is needed to switch the flow of material to different production lines.

Benefits ▼

- ✓ **No contamination due to the 304 stainless steel contact inserts;**
- ✓ **Minimum pressure drop thanks to inflatable seal;**
- ✓ **Minimum friction during diverting operation due to inflatable seal;**
- ✓ **ATEX-compliant pneumatic actuator and solenoid valves;**
- ✓ **Use with different materials in one configuration only;**
- ✓ **Quick process integration thanks to lightweight design and easy handling;**
- ✓ **Modular design and easy maintenance thanks to small numbers of components.**

Lime Dosing

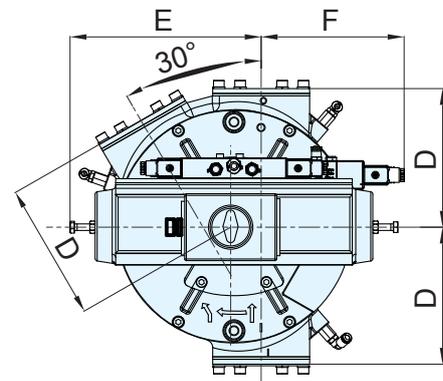

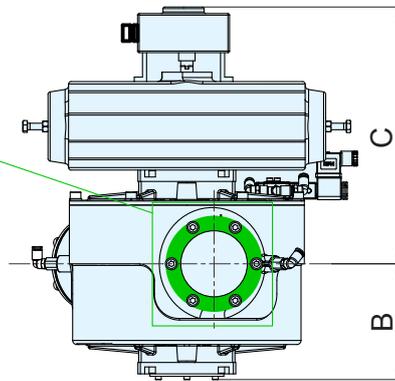

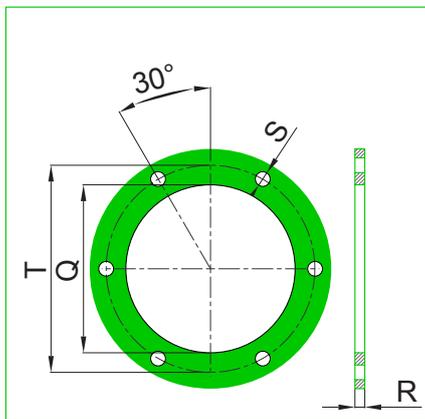

Diverter Valves VAR

Technical Features / Performance ▼

- ▶ Basic structure manufactured from cast aluminium
- ▶ Operating temperature: -20° C to 80° C (-4° F to 180° F)
- ▶ Diverter operating pressure: max. 3.5 bar (36 PSI)
- ▶ Inflatable seal closure pressure: max. 4 bar (58 PSI)
- ▶ Pneumatic actuator activation pressure: max. 8 bar (116 PSI)
- ▶ Range comprising diameters from 80mm to 150mm (3 to 6 in)
- ▶ Micro-switch box for signalling actuator position
- ▶ Electro-pneumatic actuator with different supply voltages: 24/48/110/230 V AC

Diverter Valves - VAD

24

Description ▼

VAD Diverter Valves consist of an aluminium die-cast casing and a swivel flap that closes one duct or the other. The range suits common pipe standards used for pneumatic conveying. Internal sealing of the body is achieved through low friction gaskets.

Surface treatment is available to make the valves suitable for operation with different materials.

Function ▼

VAD-type Diverter Valves are suitable for use in pneumatic conveying lines for handling any type of product in powder or granular form. Through activation of the actuator direction of the material flow is changed. VAD-type Diverter Valves guarantee minimum pressure loss and contamination-free, pressure-proof operation.

Application ▼

VAD-type Diverter Valves are suitable for use in pneumatic conveying lines for handling any type of product in powder or granular form. Through activation of the actuator direction of the material flow is changed. VAD-type Diverter Valves guarantee minimum pressure loss and contamination-free, pressure-proof operation.

Benefits ▼

- ✓ **ATEX certified drives components;**
- ✓ **Manual, Pneumatic and Electric drives available;**
- ✓ **Same drives used also for WAM's valves reduces costs and spare parts;**
- ✓ **Square Counter-Flanges assures system compatibility;**
- ✓ **Using with different product with a single configuration;**
- ✓ **Quickly integration into the process thanks lightweight and easy to handle;**
- ✓ **Modular design and easy maintenance thanks to small numbers of components.**

Lime Dosing

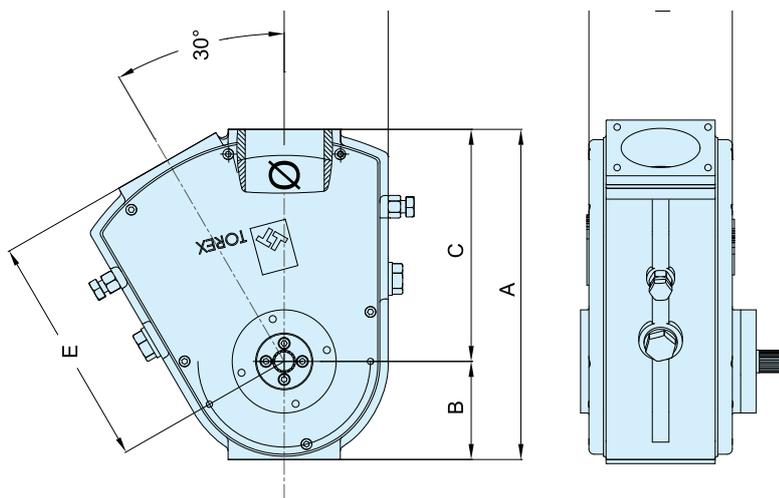

Diverter Valves - VAD

Technical Features / Performance ▼

- ▶ Lightweight design
- ▶ Compact overall dimensions
- ▶ Basic structure manufactured from cast aluminium
- ▶ Operating temperature: -20° C to 80° C (-4° F to 180° F);
- ▶ Diverter operating pressure: max. 2.5 bar (35 PSI);
- ▶ Low friction gaskets
- ▶ Pneumatic actuator activation pressure: max. 8 bar (116 PSI);
- ▶ Range from 50 mm up to 100 mm
- ▶ Micro-switch box for signalling actuator position
- ▶ Electro-pneumatic actuator with possibility of different supply voltages 24/48/110/230 V AC

Flap Diverter Valve - VAB

25

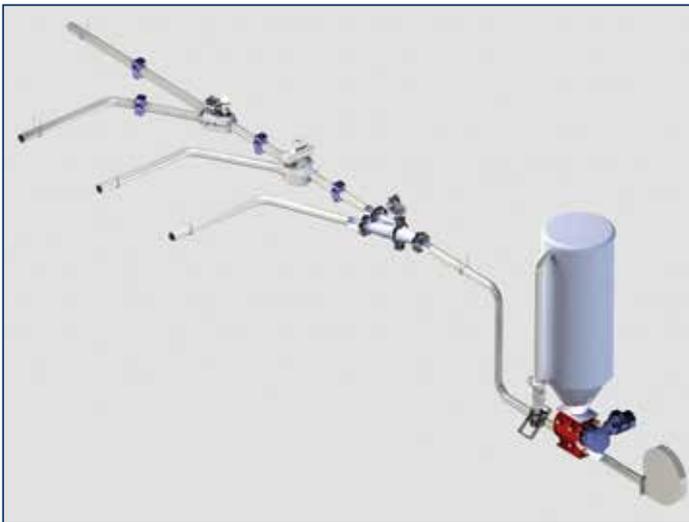

Description ▼

The VAB Flap Diverter Valve consists of a robust casing manufactured from two sections, divided in the middle of the flange for ease of access to the internal sealing flap. The flap components and actuating cylinder are connected to the drive shaft which is integrated into the valve body.

Function ▼

The VAB Flap Diverter Valve is designed to meet pneumatic conveying requirements to re-route powders, pellets or granules from one discharge point to another with minimum pressure drop and high sealing efficiency. The Flap Diverter Valve uses a swinging flapper to convey material from one duct to another.

Application ▼

VAB Flap Diverter Valves are fitted directly to the pneumatic conveying ducts when diverting the material flow to different pneumatic lines is needed.

Benefits ▼

- ✓ **Lightweight and easy to handle;**
- ✓ **Modular design for easy maintenance;**
- ✓ **Low pressure drop;**
- ✓ **Smooth internal surfaces - no sedimentation corners;**
- ✓ **Pneumatic, electric or manual actuator;**
- ✓ **7 sizes ranging from 50 to 200 mm;**
- ✓ **Flap Diverter Valve - VAB can be used as Diverter or Converter.**

Lime Dosing

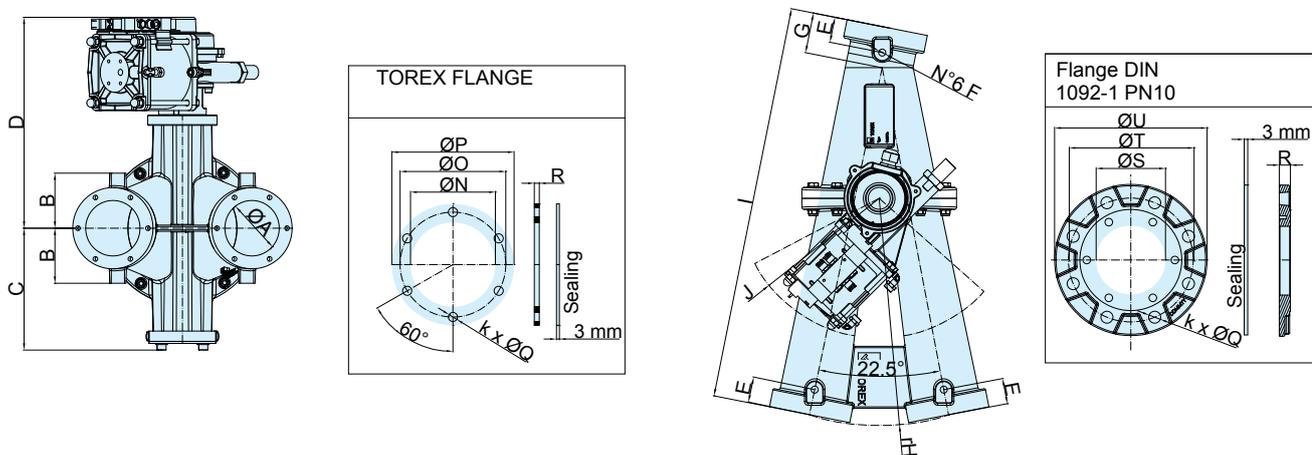

Flap Diverter Valve - VAB

Technical Features / Performance ▼

- ▶ Material: cast aluminium
- ▶ Moveable Flap: EPDM
- ▶ Working Temperature: from - 20°C to 80°C
- ▶ Working Pressure: Max. + 2.0 bar and -0.3 bar
- ▶ Actuators: Pneumatic (CP101 + MIC23), Electric (AE), Manual (CM)
- ▶ Diameter Range: 50 mm – 65 mm – 80 mm – 100 mm – 125 mm – 150 mm – 200 mm
- ▶ Atex Certification available for Group II Cat. 1D/3D C T 135°C

External Electric Vibrators MVE-Type

28

Description ▼

The range of MVE-type External Electric Vibrators is the result of fifty years of experience in vibrating technology for various industrial applications worldwide.

Function ▼

MVE-type External Electric Vibrators are used in a number of different applications: as material flow aids, for screening, conveying, cleaning, detaching, compacting and sorting.

Application ▼

MVE-type External Electric Vibrators are used in powder and granular material processing plants where flow aids are required. Typical applications are hopper emptying, de-stoning machines, vibro-separators, bin activators.

Benefits ▼

- ✓ **2-years-warranty including electric components;**
- ✓ **Ex-stock delivery;**
- ✓ **High quality/price ratio;**
- ✓ **Low maintenance.**

Lime Dosing

External Electric Vibrators MVE-Type

Technical Features / Performance ▼

- ▶ SKF Bearing
- ▶ Working temperature: -20° to 40°C (-4° F to 104° F)
- ▶ Standard voltage: 230/400V, 50Hz (264/460V 60Hz)
- ▶ Standard: Atex Ex II 3D CERTIFIED

“VB” Vibrating Bin Aerators

29

Description ▼

Vibrating Bin Aerator types VB (VBE, VBI, VBM) combine product aeration under operating pressure reaching 6 bar (87 PSI) with an additional slight vibration on the silo wall (see rear for sizing, positioning and number of aerators). Due to its design, damage of the silo is impossible even with abrasive materials. An additional backstop valve is not required as, due to the work pressure ranging from 2 to 6 bar (29-87 PSI), no material can enter the zone beneath the elastic FDA-approved silicon lip. VB-type Vibrating Bin Aerators are used for the improvement of mass flow with powders and granular materials. A stainless steel shaft version (VBI) is available on request.

Function ▼

Compressed air is introduced into the stored material through the silicon lip which adheres to the inside silo wall. By varying the operating pressure within a range between 2 and 6 bar (29 to 87 PSI) the intensity of vibration of the elastic silicon lip can be changed. Due to interval operation and a maximum operation time of 5 seconds air consumption is very low.

Application ▼

VB Vibrating Bin Aerators fitted on silos, or storage, weigh or feed hoppers are widely used as fluidisation system in all the situations in which there are powdery materials to discharge.

Benefits ▼

- ✓ **Two combined effects: vibration and aeration;**
- ✓ **No damage to the bin structure;**
- ✓ **Suitable for powdery and granular materials (non hygroscopic);**
- ✓ **Self-cleaning;**
- ✓ **Abrasion-resistant;**
- ✓ **Durable;**
- ✓ **Easy to fit;**
- ✓ **Maintenance-free.**

Lime Dosing

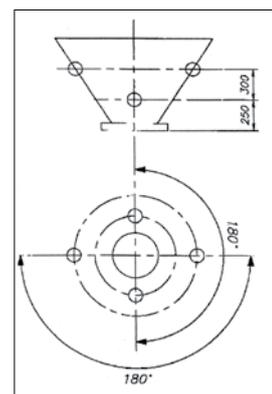

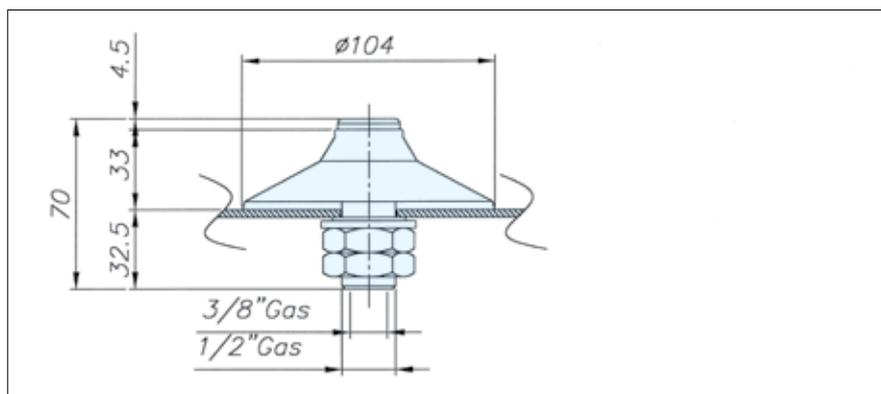

“VB” Vibrating Bin Aerators

Technical Features / Performance ▼

- ▶ Aluminum “anticorodal” shaft (304 SS on request – VBI-Type)
- ▶ Vibrating silicon membrane (FDA-approved)
- ▶ EPDM seal
- ▶ ½” Washer (galvanised steel)
- ▶ 2 nickel-plated brass ½” hexagonal nuts
- ▶ Working temperature: -40° C to 170° C (-40° F to 340° F)
- ▶ Working pressure: 2 to 6 bar (29 to 87 PSI)

Overall Dimensions ▼

Lime Dosing

Tubular Screw Feeders TU

30

Description ▼

TU Tubular Screw Feeders are highly versatile offering numerous solutions for feeding and conveying powdery materials. They are manufactured from carbon steel with a suitable surface finishing. They are made up from a tubular trough that is equipped with at least one inlet and outlet spout, a welded flange at each tube end, helicoid screw flighting welded on a centre pipe with a coupling bush at each end, two end bearing assemblies complete with self-adjusting shaft sealing unit, a number of intermediate hanger bearings depending on the overall length of the screw conveyor. Furthermore, TU Tubular Screw Feeders are equipped with a gear motor that suits the application. They come in a medium-heavy-duty design.

Function ▼

TU Tubular Feeders are highly versatile and offer a variety of standard solutions for handling powders. A powdery material such as lime is discharged from a silo, picked up by the TU Screw Feeder and fed into a milk of lime dissolver.

Application ▼

Lime is stored in a silo from where it is discharged by means of a vibratory bin activator into a screw feeder which transfers the lime to a dissolver for the preparation of milk of lime.

Benefits ▼

- ✓ Easy installation;
- ✓ Durable;
- ✓ Small diameter;
- ✓ Great efficiency;
- ✓ Precise feed rates;
- ✓ Modular design offering great variety of options;
- ✓ Optimum price-performance ratio.

Lime Dosing

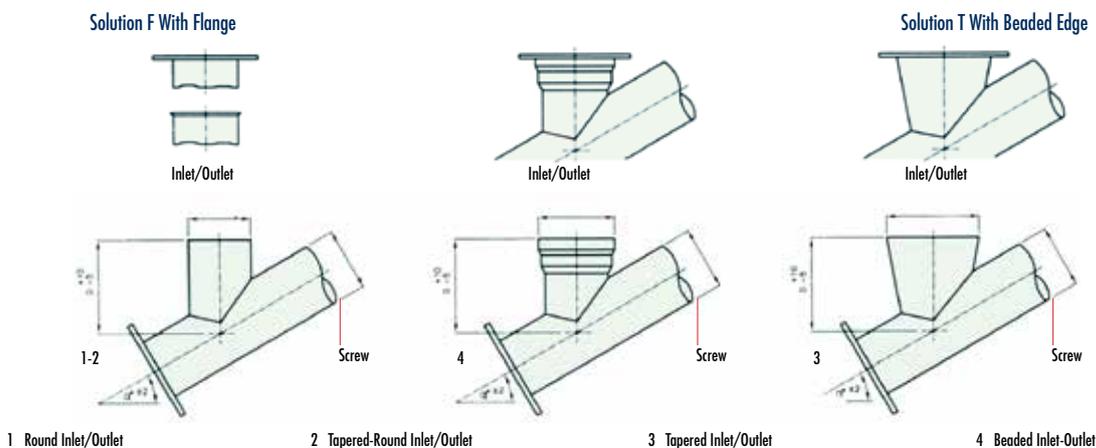

Tubular Screw Feeders TU

Technical Features / Performance ▼

- ▶ Powder-coated
- ▶ Wide range of outside tube diameters
- ▶ Outside tube complete with welded end flanges, one inlet, one outlet, inspection hatch beneath inlet and each intermediate hanger bearing
- ▶ Helicoid screw flighting welded on centre pipe
- ▶ End bearing assemblies complete with self-adjusting shaft sealing unit
- ▶ Splined shaft couplings
- ▶ Lifting eyes on each tube section
- ▶ Various types of screw flighting
- ▶ Reduced overall dimensions and compact design
- ▶ Small number of components and spare parts
